

## Credit conversion from APU to ECTS schemes

Many students completing an undergraduate degree from Azim Premji University (APU) aspire to postgraduate study in Europe. Under the European Credit Transfer System (ECTS), the required credits are 180. Students are said to gain these in 3 years.

A credit indicates the workload and is based on the study hours. Different countries have different conversion schemes. For example, 20 study hours translates to an ECTS credit in the UK.

Azim Premji University offers rigorous full-time undergraduate programmes that are on par with those of other internationally renowned institutions. Students graduating after 3 years would definitely have completed the requirement mentioned above, but a clear credit conversion table is needed for declaration. The following serves this purpose.

- For batches who joined until 2022, the minimum requirement to complete the 3-year degree is 84. Most of these come from 3-credit courses. In a typical course, students have 3 hours of direct contact and 6 hours of self-study or tutorials per week. This will result in 135 study hours per semester per course. Thus, each credit would translate to  $135/3 = 45$  study hours. Therefore, per the UK convention of 20 study hours per ECTS credit, each APU credit would mean  $45/20 = 2.25$  ECTS credits. Thus, a student graduating with 84 APU credits at the end of 3 years would have accrued  $84 \times 2.25 = 189$  ECTS credits.
- For batches who joined from 2023 onwards, the minimum requirement to complete the 3-year degree is 125. Most of these come from 5-credit courses. In a typical course, students have 3 hours of direct contact and 7 hours of self-study or tutorials per week. This will result in 150 study hours per semester per course. Thus, each credit would translate to  $150/5 = 30$  study hours. Therefore, per the UK convention of 20 study hours per ECTS credit, each APU credit would mean  $30/20 = 1.5$  ECTS credits. Thus, a student graduating with 125 APU credits at the end of 3 years would have accrued  $125 \times 1.5 = 187.5$  ECTS credits. Similarly, a student graduating with 160 APU credits at the end of 4 years would have accrued  $160 \times 1.5 = 240$  ECTS credits.
